

Gail 5 Year & NCI Lifetime Models

Factors Used

The Gail 5 Year & NCI Lifetime Models utilize the following factors:

- Patient must be female
- Patient's age must be between 35 and 85
- Patient's ethnicity
- Patient's age at menarche
- Patient's age at first full-term pregnancy
- Number of first degree relatives who have had breast cancer
- Patient's biopsy history or lack of history

No calculations will be generated for the following reasons:

- Patient is male
- Patient has previous diagnosis of lobular carcinoma in situ (LCIS)
- Patient has previous diagnosis of ductal carcinoma in situ (DCIS)
- Patient is younger than 35 or older than 85
- Patient has previous history of breast cancer
